AGE-962 Supply and Demand Analysis	3(3-0)
------------------------------------	--------

<u>Course Objectives:</u> To familiarize the students with numerous applications of the supply and demand on different microeconomic aspects and their implication for policy development purposes.

## **Course Contents:**

Basic Production Theory; Production theory and its assumptions; Production functions; Economic aspects of production, the input perceptive; Profit and maximum profit, factor demand; Supply function estimation techniques; Statistical estimation of production functions; Alternative functional forms: Quadratic; Cobb-Douglas; Statistical procedures for restricting estimated parameters. Basic demand Theory; Demand functions; Interpretation of demand elasticities; Derivation of individual and Aggregate demand functions; Factor demand functions; Derivation of factor; demand functions from duality; Estimation of demand models; Applications of demand analysis to agricultural policy issues; Optimum distribution of products; Applications of spatial equilibrium models; Reactive Programming Cost functions and their estimation; Estimation of spatial equilibrium models; resource availability and demand for resources; Resource payments and pricing.
