COURSE OBJECTIVES: To teach students different data structures that are required to design and implement various software projects. The course also aims to teach the implementation of data structures using objectoriented language C++. It will familiarize the students with practical applications of data structures. The students will also be taught basic techniques for analysis of algorithms.

COURSE OUTCOMES: At the completion of the course, students will be able to..

- 1. Apply moderately advanced problem solving techniques by creating and applying algorithms
- 2. Apply moderately advanced concepts of structured programming by task partitioning (functions)

- 3. The student will use multidimensional arrays, stacks, queues and linked lists, and apply to simple problem solving
- 4. Use object oriented programming and apply it to data structure design (classes)
- 5. Implement moderately advanced data organization and manipulation in software.
- 6. Understand better the software development process via numerous homework assignments
- 7. Perform software troubleshooting (debugging) skills via numerous homework assignments

TOPICS COVERED:

- 1. Introduction to Data Structures and C++
- 2. Linked Lists, Stacks and Queues
- 3. Recursion
- 4. Trees, Sorting and Searching
- 5. Introduction to Object Oriented Programming
- Classes, Objects, Access Specifiers, Data Members, Member Functions, Abstract Data Types (ADT), Information Hiding, Encapsulation and Reference Variables.
- Constructors and Destructors, Overloaded Constructors, Default Constructors,
- 8. Function Overloading and Operator Overloading
- 9. Inheritance, Types of Inheritance, Derived Classes and Method Overriding

List of Practicals

| <u>Ser</u> | Practical Title | <u>Equipment</u> |
|------------|--|-----------------------------------|
| 1. | Class for the manipulation of complex | Software: Microsoft Visual Studio |
| | numbers | 6.0 |
| 2. | Implement a Class: 'Date' and overload | Software: Microsoft Visual Studio |
| | operator to apply on instances of Date | 6.0 |
| | class, modify the Date Class with more | |
| | overload functions | |
| 3. | Create a class Vector3 for 3-D vector | Software: Microsoft Visual Studio |
| | calculations, create a class for dynamic | 6.0 |
| | array of integers | |
| 4. | Create a class 'List' for a dynamic-memory- | Software: Microsoft Visual Studio |
| | allocated link-list, add templates and sorting | 6.0 |
| 5. | Modify Lab 4 to make a double-link-list and | Software: Microsoft Visual Studio |

| | then a circular link-list | 6.0 |
|-----|--|-----------------------------------|
| 6. | Implement a Stack (as a dynamic link-list) | Software: Microsoft Visual Studio |
| | and solve the problem for mismatching | 6.0 |
| | brackets in an equation using the stack. | |
| 7. | Search a Keyword in a files | Software: Microsoft Visual Studio |
| | | 6.0 |
| 8. | Make a simulation of scheduling by using | Software: Microsoft Visual Studio |
| | objects of a queue class | 6.0 |
| 9. | Create a class implementing a binary tree. | Software: Microsoft Visual Studio |
| | | 6.0 |
| 10. | Implement a Binary Search Tree using | Software: Microsoft Visual Studio |
| | dynamic memory allocation. | 6.0 |
| 11. | Getting Started with Object Oriented | Software: Microsoft Visual Studio |
| | Development | 6.0 |
| 12. | Implementing Classes with Properties and | Software: Microsoft Visual Studio |
| | Methods | 6.0 |
| 13. | Implementing Inheritance and Abstraction | Software: Microsoft Visual Studio |
| | | 6.0 |
| 14. | Implementing Interfaces | Software: Microsoft Visual Studio |
| | | 6.0 |
| 15. | Designing Object Oriented Structures | Software: Microsoft Visual Studio |
| | | 6.0 |
| 16. | Implementing Delegates, Events and | Software: Microsoft Visual Studio |
| | Exceptions | 6.0 |
| 17. | Designing Object Oriented Collaboration | Software: Microsoft Visual Studio |
| | | 6.0 |
| 18. | Deploying Components and Class Libraries | Software: Microsoft Visual Studio |
| | | 6.0 |
