Course Description

The course is designed to develop all four skills -- listening, speaking, reading, and writing skills for the purpose of gaining an accredited qualification required for engineers. This course will provide an opportunity to students to recognize everyday text and take part in group discussions. Students will learn that effective communication involves trust, respect for others, cooperation, and tolerance. They will communicate information, ideas and opinions using specified forms and contexts. Students are encouraged to develop the skills associated with planning and organizing work activities and interacting with others as a part of a team. This course will help the students in further development of their basic literacy skills. These skills are required to participate confidently and constructively when interacting with others, and to use language clearly and effectively to achieve purposes and convey meanings.
