

CS 860 Artificial Intelligence (3-0)

Textbook: [AIMA] *Artificial Intelligence: A Modern Approach (2nd Edition)*, by Stuart Russel and Peter Norvig, Prentice Hall, 2002

ISBN-10: 0137903952, ISBN-13: 978-

0137903955

Reference Books:

- Artificial Intelligence Structures and Strategies for Complex Problem Solving by George F Luger, Addison Wesley, 4th Ed 2002
- Artificial Intelligence: A New Synthesis by Nils Nilsson, Morgan Kaufman, 1997.

Objective:

The primary objective of this course is to provide an introduction to the basic principles and applications of Artificial Intelligence. Programming assignments are used to help clarify basic concepts. The emphasis of the course is on teaching the fundamentals, and not on providing a mastery of specific commercially available software tools or programming environments. In short, this course is about the design and implementation of intelligent agents---software or hardware entities that perform useful tasks with some degree of autonomy.

Course Outcome:

Upon successful completion of the course, students will have an understanding of the basic areas of artificial intelligence including problem-solving, knowledge representation, reasoning, decision making, planning, perception and action, and learning. Students will also be able to design and implement key components of intelligent agents of moderate complexity in C and/or Lisp or Prolog and evaluate their performance. Graduate students

are expected to develop familiarity with current research problems, research methods, and the research literature in AI.

Course Outline:

Artificial Intelligence (AI) seeks to understand the mechanisms underlying thought and intelligent behavior, and their embodiment in machines. This course approaches AI by using Intelligent Agents as an integrating perspective on the key topics in intelligent behavior.

| Topics | Allocated Periods |
|---|-------------------|
| <p>Introduction to AI</p> <p>Definitions (Acting Humanly, Cognitive, “laws of Thought”, Rational agent approaches</p> <p>Historical perspective</p> <p>Physical symbol system hypothesis</p> <p>Intelligent agents</p> <p>Agents and Environment</p> <p>The concept of rationality</p> <p>Performance measures</p> <p>Omniscience, learning and autonomy</p> <p>Nature of environments, Task environments and their Properties</p> <p>The Structure of agents</p> <p>Simple Reflex agent</p> <p>Model based agent</p> <p>Goal Based agents</p> <p>Utility based agents</p> <p>Learning agents</p> <p>Problem solving by searches</p> | <p>45</p> |

| | |
|--|--|
| Problem solving agents | |
| Problem formulating | |
| Measuring performance | |
| Search Strategies | |
| Uninformed Searches | |
| Breadth first | |
| Depth first | |
| Depth limited | |
| Iterative deepening depth-first | |
| Bidirectional | |
| Comparison of Uninformed problem solving methods | |
| Informed searches | |
| Greedy best-first | |

A*

Heuristic Functions (learning, devising)

Local search algorithms

Hill climbing

Simulating annealing

Local beam

Genetic algorithms

Constraints Satisfaction problems

Basics of CSP

Structure of problems

Backtracking, Forward chaining

Variable and value ordering

Intelligent backtracking

Local searches for CSPs

Adversarial Searches

Games

Optimal decisions

Mini-max algorithm

Alpha-Beta pruning

Logical agents

Knowledge-based agents

Propositional logic (syntax, semantics)

Conjunctive/disjunctive Normal form, Horn clauses

| | |
|--|--|
| <p>Reasoning in Propositional logic</p> <p>Resolution</p> <p>Forward and backward chaining</p> <p>Reasoning algorithms</p> <p>First-Order Logic (syntax, semantics)</p> <p>Inference in FOL</p> <p>Conjunctive Normal form</p> <p>Unification and lifting, forward and backward chaining, resolution</p> <p>Comparison of two representational languages</p> <p>Machine Learning</p> <p>Introduction ,induction, Types of machine learning</p> <p>Nearest Neighbors</p> <p>Decision Trees</p> <p>Neural Networks</p> <p>Learning Conjunctions</p> <p>Linear and non Linear saporability</p> <p>Evaluating learning algorithms</p> | |
| <p>Natural language Understanding</p> <p>Levels of language analysis</p> <p>Types of grammar</p> <p>Parsing(Top-down, bottom-up)</p> <p>natural language applications.</p> | |
