School of Art, Design and Architecture

Credit Hours: 3(2-1) Semester: Second-Spring Instructor: Email: Imail: Imail:	Course Title:	Manufacturing Materials	Course Code:	ID-143	
Email: Mebsite: Counseling Hours: Office: Research Assistant: Email: Email: Extension: Website: Extension: Pre-requisites: None Course Description: Course Objectives: • Familiarization with most used materials in today's context • Understanding general sourcing and acquisition of materials • Have a basic knowledge of material processing methods • Understand the properties of materials, used in manufacturing purposes • Be able to interpret product designs for low volume, batch production • Appreciate product life, recycling and environmental issues • Understand the importance of sustainability in a progressing world Course Outcomes: • Understanding of materials as used in ID • Basic knowledge of applied mechanics/materials relating to	Credit Hours:	3(2-1)	Semester:	Second-Spring	
Website: Office: Research Assistant: Email: Website: Extension: Pre-requisites: None Course Description: Course Objectives: • Familiarization with most used materials in today's context • Understanding general sourcing and acquisition of materials • Have a basic knowledge of material processing methods • Understand the properties of materials, used in manufacturing purposes • Be able to interpret product designs for low volume, batch production • Appreciate product life, recycling and environmental issues • Understand the importance of sustainability in a progressing world Course Outcomes: • Understanding of materials as used in ID • Basic knowledge of applied mechanics/materials relating to	Instructor:

 Familiarization with most used materials in today's context Understanding general sourcing and acquisition of materials Have a basic knowledge of material processing methods Understand the properties of materials, used in manufacturing purposes Be able to interpret product designs for low volume, batch production Appreciate product life, recycling and environmental issues Understand the importance of sustainability in a progressing world Course Outcomes: Understanding of materials as used in ID Basic knowledge of applied mechanics/materials relating to 	Pre-requisites:	None			
 Familiarization with most used materials in today's context Understanding general sourcing and acquisition of materials Have a basic knowledge of material processing methods Understand the properties of materials, used in manufacturing purposes Be able to interpret product designs for low volume, batch production Appreciate product life, recycling and environmental issues Understand the importance of sustainability in a progressing world 	Course Description:	Course Objectives:			
 Understanding general sourcing and acquisition of materials Have a basic knowledge of material processing methods Understand the properties of materials, used in manufacturing purposes Be able to interpret product designs for low volume, batch production Appreciate product life, recycling and environmental issues Understand the importance of sustainability in a progressing world Course Outcomes: Understanding of materials as used in ID Basic knowledge of applied mechanics/materials relating to 		-			
 Have a basic knowledge of material processing methods Understand the properties of materials, used in manufacturing purposes Be able to interpret product designs for low volume, batch production Appreciate product life, recycling and environmental issues Understand the importance of sustainability in a progressing world Course Outcomes: Understanding of materials as used in ID Basic knowledge of applied mechanics/materials relating to 					
 Understand the properties of materials, used in manufacturing purposes Be able to interpret product designs for low volume, batch production Appreciate product life, recycling and environmental issues Understand the importance of sustainability in a progressing world Course Outcomes: Understanding of materials as used in ID Basic knowledge of applied mechanics/materials relating to 					
 purposes Be able to interpret product designs for low volume, batch production Appreciate product life, recycling and environmental issues Understand the importance of sustainability in a progressing world Course Outcomes: Understanding of materials as used in ID Basic knowledge of applied mechanics/materials relating to 					
 Be able to interpret product designs for low volume, batch production Appreciate product life, recycling and environmental issues Understand the importance of sustainability in a progressing world Course Outcomes: Understanding of materials as used in ID Basic knowledge of applied mechanics/materials relating to 					
 production Appreciate product life, recycling and environmental issues Understand the importance of sustainability in a progressing world Course Outcomes: Understanding of materials as used in ID Basic knowledge of applied mechanics/materials relating to 					
 Understand the importance of sustainability in a progressing world Course Outcomes: Understanding of materials as used in ID Basic knowledge of applied mechanics/materials relating to 					
 Understand the importance of sustainability in a progressing world Course Outcomes: Understanding of materials as used in ID Basic knowledge of applied mechanics/materials relating to 					
world Course Outcomes: Understanding of materials as used in ID Basic knowledge of applied mechanics/materials relating to					
 Understanding of materials as used in ID Basic knowledge of applied mechanics/materials relating to 					
 Understanding of materials as used in ID Basic knowledge of applied mechanics/materials relating to 		Course Outcomesu			
 Basic knowledge of applied mechanics/materials relating to
